7-(3) Lead-out	7		

WARNING!

When replacing the parts marked with , be sure to use the designated parts to ensure safety.

1. Service Precautions

■ NOTES

1. When the tonearm, turntable mechanism or the like has been removed or serviced, be sure to adjust lead-out. Especially when the tonearm has been replaced, be sure to adjust lead-in together with lead-out.
2. Operating the turntable while listening to a FM broadcast, especially if the FM tuner is set off station will cause noise to be induced into the tonearm. Therefore, perform correct tuning for proper use.

In addition, if the signal cord and/or power cord of the turntable is located near the AM bar antenna harmonic hum will occur.

3. On Oiling
 - Oiling the motor: Not required.

CHECKING YOUR LINE VOLTAGE (For U.S. Military Market and Other Countries)

Before inserting the power plug, please check this setting to see that it corresponds with the line voltage in your area. If it doesn't, be sure to adjust the voltage selector switch to the proper setting before operating this equipment. The voltage selector switch is located on the cabinet under the platter. Simply insert a screw driver into the voltage selector switch and turn it in either direction while pressing slightly and in such a way that desired voltage marked on the switch is positioned at the arrow marked on the cabinet under the platter. The voltage selector switch accommodates up to three turns in either direction.

2. Specifications

TURNTABLE

Type	: Fully automatic Direct-drive turntable
Drive Motor	: DC Servomotor
Speeds	: 33-1/3 and 45 rpm
Wow and Flutter	: Less than 0.03% (WRMS) 0.05% (DIN)
Signal to Noise Ratio	: More than 75 dB (DIN-B)
Speed Adjustment Range	: More than $\pm 3\%$
Platter	: 30.8 cm diameter Die-cast aluminum alloy

CARTRIDGE

(Except the L-F66 for U.S.A., Canada)

Type	: Moving magnet
Stylus	: 0.6 mil. conical diamond DT-Z1S
Optimum Tracking Force	: 1.75g \pm 0.25g
Output	: 3 mV (1 kHz)
Frequency Response	: 10 to 25,000 Hz (DT-Z1S)
Separation	: Better than 25 dB (1 kHz)
Load Impedance	: 47 k Ω to 100k Ω
Compliance	: 30 x 10 ⁻⁶ cm/dyne (Static) 10 x 10 ⁻⁶ cm/dyne (Dynamic)

TONEARM

Type	: Statically balanced S-shaped tubular arm with JVC developed TH (Tracing Hold) balancing system and tracking force dial in 0.1 gram steps.
Effective Arm Length	: 220 mm
Overhang	: 15 mm
Applicable Tracking Force Range	: 0 to 3 grams
Applicable Cartridge Weight	: 12.5~18.5 grams (including headshell)

GENERAL

Dimensions	: 13.4(H) x 43.8(W) x 38.2(D)cm (With cover closed) (5-9/32" x 17-1/4" x 15-1/32")
Weight	: 5.2 kg (11.5 lbs) (Without corrugated cardboard case)
Power Supply	: See table on the back cover
Power Consumption	: See table on the back cover

3. Removal Procedures

3-(1) Bottom Cover

Remove the 13 screws (1) - (13) shown in the diagram below, and lift the bottom board off.

Fig. 1

3-(2) Printed Circuit Board

1. Remove the start and repeat rods.
2. Remove screw (1).

Note: Screw (2) is used to secure the heat sink.

Fig. 2

NOTE: When remounting, confirm that the wiring does not touch any transistor on the printed circuit board.

4. Names and Their Functions

Fig. 3

1. Stroboscopic Pattern

The stroboscopic pattern on the outer circumference of the platter is used to check RPM. Adjust RPM with SPEED ADJUST knob until the stroboscopic pattern looks standing still — the specified power frequencies and RPM. are shown on the front panel ass'y.

2. SIZE SELECT Switch

Setting of this switch is made according to the record size.

17 cm record: Press this switch in (■).

30 cm record: Re-depress this switch out (■).

Note: When it has been already pressed, press it once again.

3. SPEED ADJUST Knob

F ◀ : Turn this knob in this direction (counterclockwise) to increase the platter rotating speed.

S ▶ : Turn this knob in this direction (clockwise) to decrease the platter rotating speed.

4. SPEED Indicators

This indicator indicates RPM 33 or 45. When RPM changes, the indicator lamp lights corresponding to that functioning RPM.

5. REPEAT Indicator

This indicator indicates the repeat play of the record. This indicator lights by pressing the REPEAT switch in (■).

6. ANTI-SKATING Knob

This knob is used to eliminate the force that pulls the tonearm inward by centripetal force, and to prevent the stylus from sliding or applying too much force to the inner wall of the record groove.

With a conical stylus, set the knob to the scale graduation marked with ●, while using an elliptical stylus or Shibata stylus, set the knob to the scale graduation marked with ●.

7. CUEING Lever

To lower the tonearm, set this lever to "▼" side, when lifting it, set this lever to "▲" side.

8. START Switch

To start record play, press this switch. Pressing this switch causes the tonearm to automatically detect the record size and slowly lower at the set position.

9. REJECT Switch

To stop record play at halfway, press this switch.

NOTE: Even though REJECT switch is pressed to stop the record halfway, if the REPEAT switch remains pressed (■), the repeat play function continues. When turning off the power, re-depress the REPEAT switch out (■) and then press the REJECT switch.

10. REPEAT Switch

To play a record repeatedly, press this switch in (■). NOTE: To stop repeated play, re-depress to set it off out (■).

11. SPEED Switch

Changes the turntable RPM to correspond to the record RPM.

45 RPM record: Press this switch in (■).

33 1/3 RPM record: Re-depress this switch out (■).

Note: When it has already been pressed, press it once again (■).

190	MD-1025	Cartridge Body	1
191	DT-Z1S	Stylus Ass'y	1
192	E34268-001	Stylus Cover	1

NOTE: 190, 191, 192 . . . Except U.S.A and Canada.

7-(3) Lead-out

Adjust lead-out in accordance with the following Items 1 and 2. The TP numbers are test point numbers inscribed on the logic board. (Fig. 10)

(A) Start Point

- (1) Measure the voltage at TP-4 with the tonearm disengaged from the tonearm rest. (With the turntable in rotation)
- (2) Adjust the lead-out start point by turning the lead-out adjusting screw shown in Fig. 10 so that the voltage with the stylus positioned at 65 mm away from the platter center becomes 5% lower than the voltage with the tonearm secured on the tonearm rest.

NOTE: Use a screwdriver of the proper size.

(B) Sensitivity

- If lead-out is to be made by the end groove
(To raise the sensitivity)
 - (1) Connect the positive and negative terminals of the tester to TP-2 and TP-3 respectively.
 - (2) Decrease the indicated voltage by 0.2 V decrements by turning the lead-out adjusting screw; at each decrement, adjust the lead-out sensitivity until the tonearm is lead out from the record.
- If lead-out is to be performed by the sound groove.
(To lower the sensitivity)
 - (1) Connect the negative and positive terminals of the tester to TP-2 and TP-3 respectively.
 - (2) Increase the indicated voltage by 0.2 V increments by turning the lead-out adjusting screw; at each increment adjust the lead-out sensitivity until the tonearm does not lead out from the record.

Fig. 10

(C) Photo-Interrupter

- (1) Measure the voltage at TP-4 with the tonearm disengaged from the tonearm rest. (With the turntable in rotation)
- (2) Connect the positive and negative terminals of the tester to TP-2 and TP-3 respectively, and adjust VR802 so that the voltage becomes 0.06 times greater than the voltage initially indicated.
- (3) After adjusting, check the lead-out sensitivity as described in "lead-out sensitivity adjustment."

How to handle the solderless connector (for USA and Canada only)

In this turntable, a solderless connector is used to connect the power cord with the primary lead wire of the power transformer.

When it is unavoidable to replace this connector for replacement of the power transformer, or the like, positively perform the replacement in accordance with the following procedure to avoid dangers.

- **Connector part number**
E03830-001 (Assembly diagram No. 64)
- **Tools**
Do not use those (small cutting pliers, etc.) other than regular tools.
- **Replacement**
 1. Cut both the power cord and the primary lead wire at near the edge of the connector to be replaced.
NOTE: Do not re-use the used connector.
 2. Peel off the coverings so that the respective conductor tops appear by about 15 mm.
NOTE: In the case of stranded wires, twist each wire.
 3. Adjust the tips of the power cord and the primary lead wire with each other, then securely insert them into the connector.
 4. Secure the nearly equal central part of the metal sleeve with the second concave (2.0) of the tool for solderless securing as shown on the right.
NOTE: Perform a complete securing.
 5. After solderless securing, check the following four points shown below.

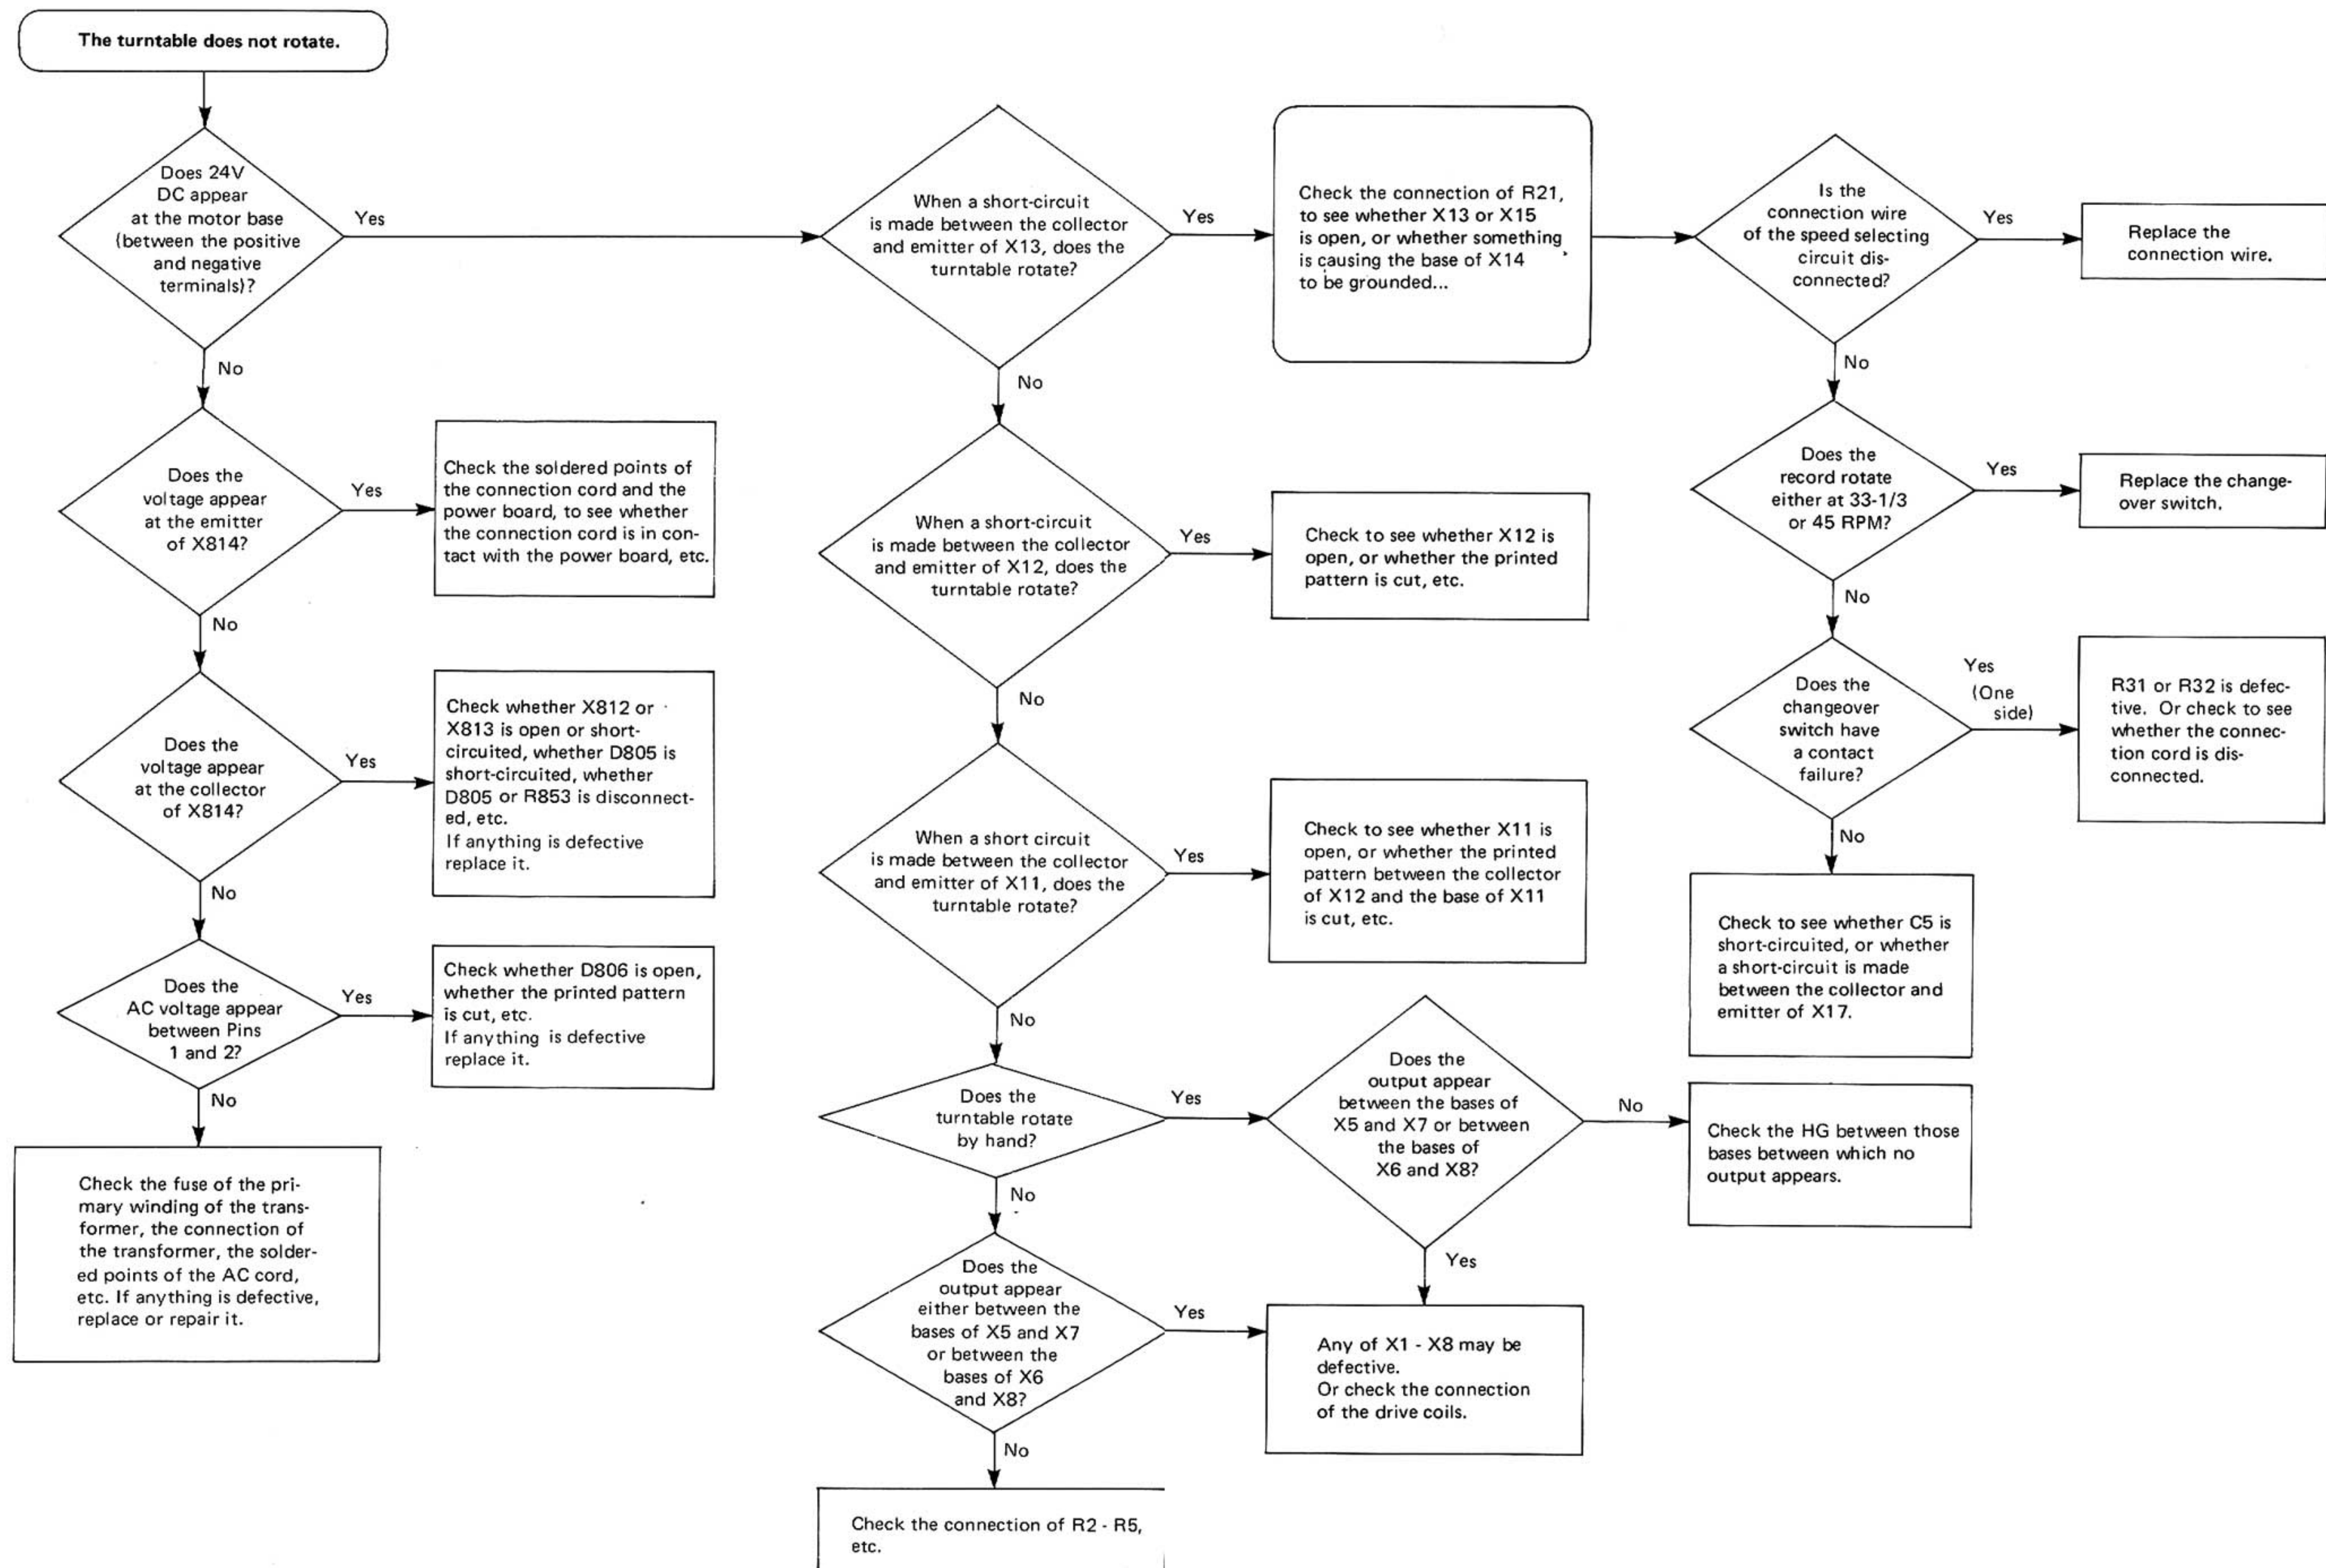

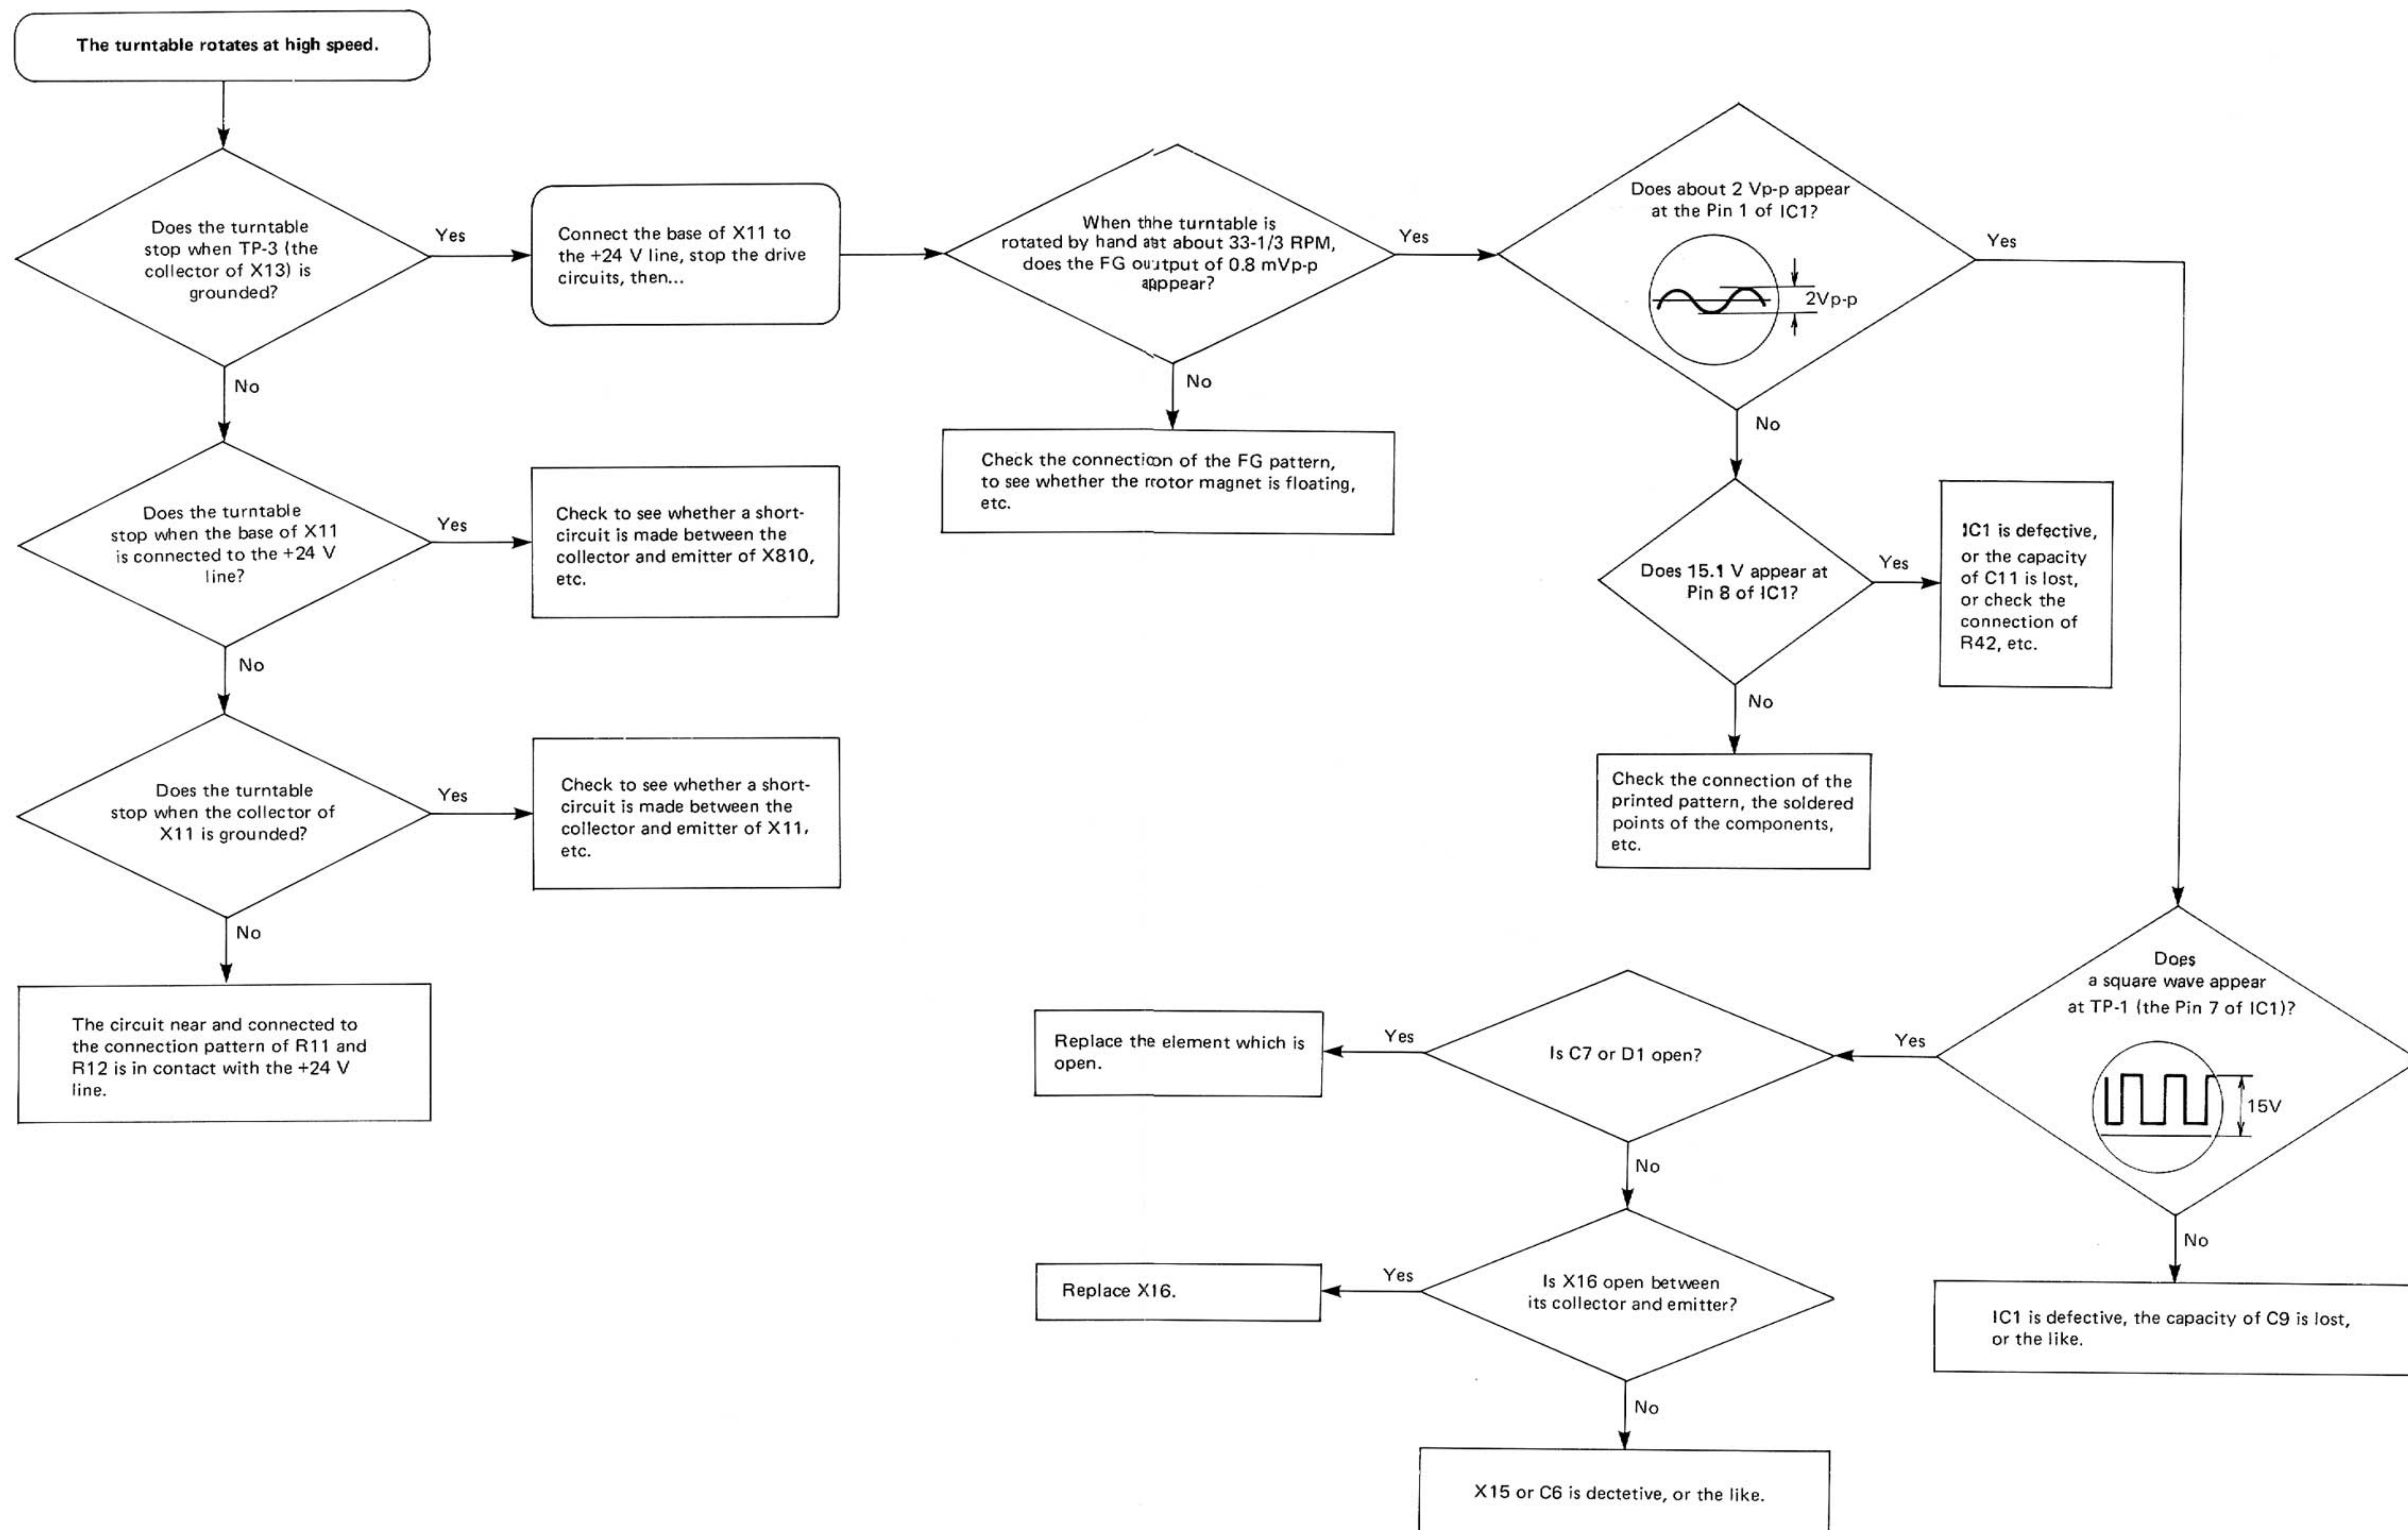

Fig. 11

8. Troubleshooting Charts

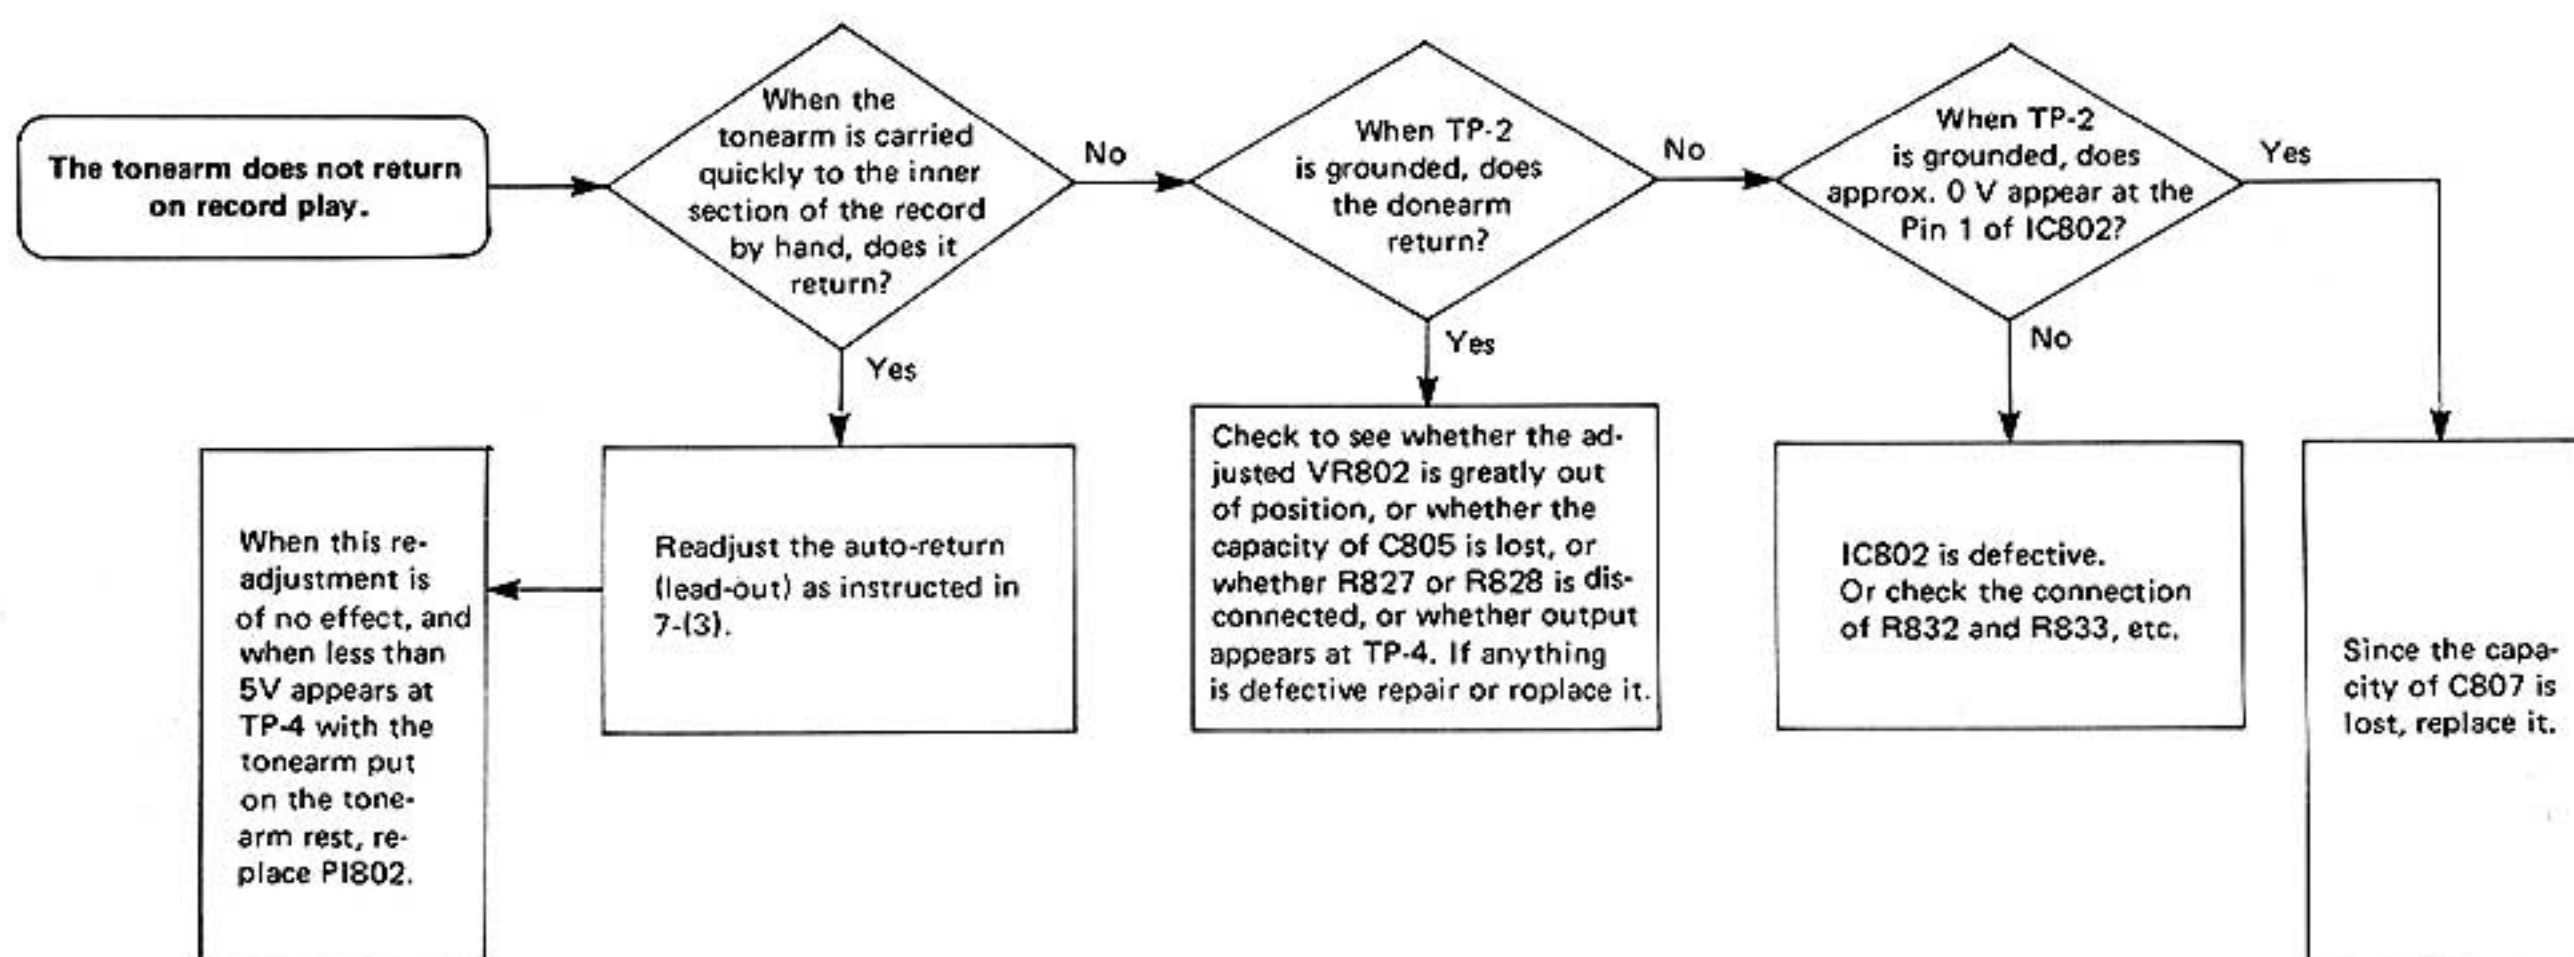

9-(1) Turntable does not rotate

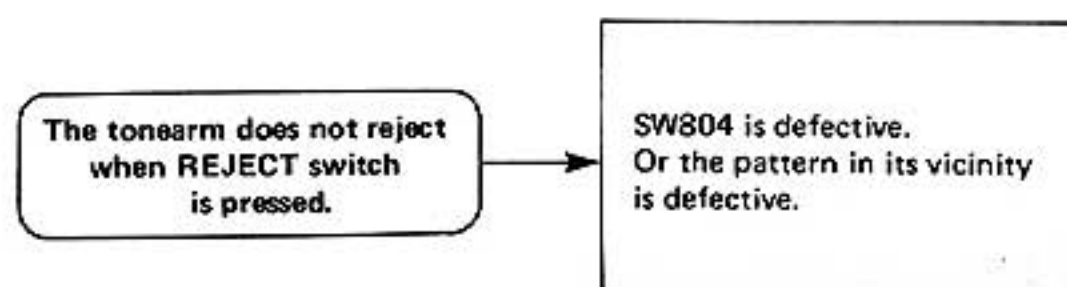

9-(2) Turntable rotates at high speed

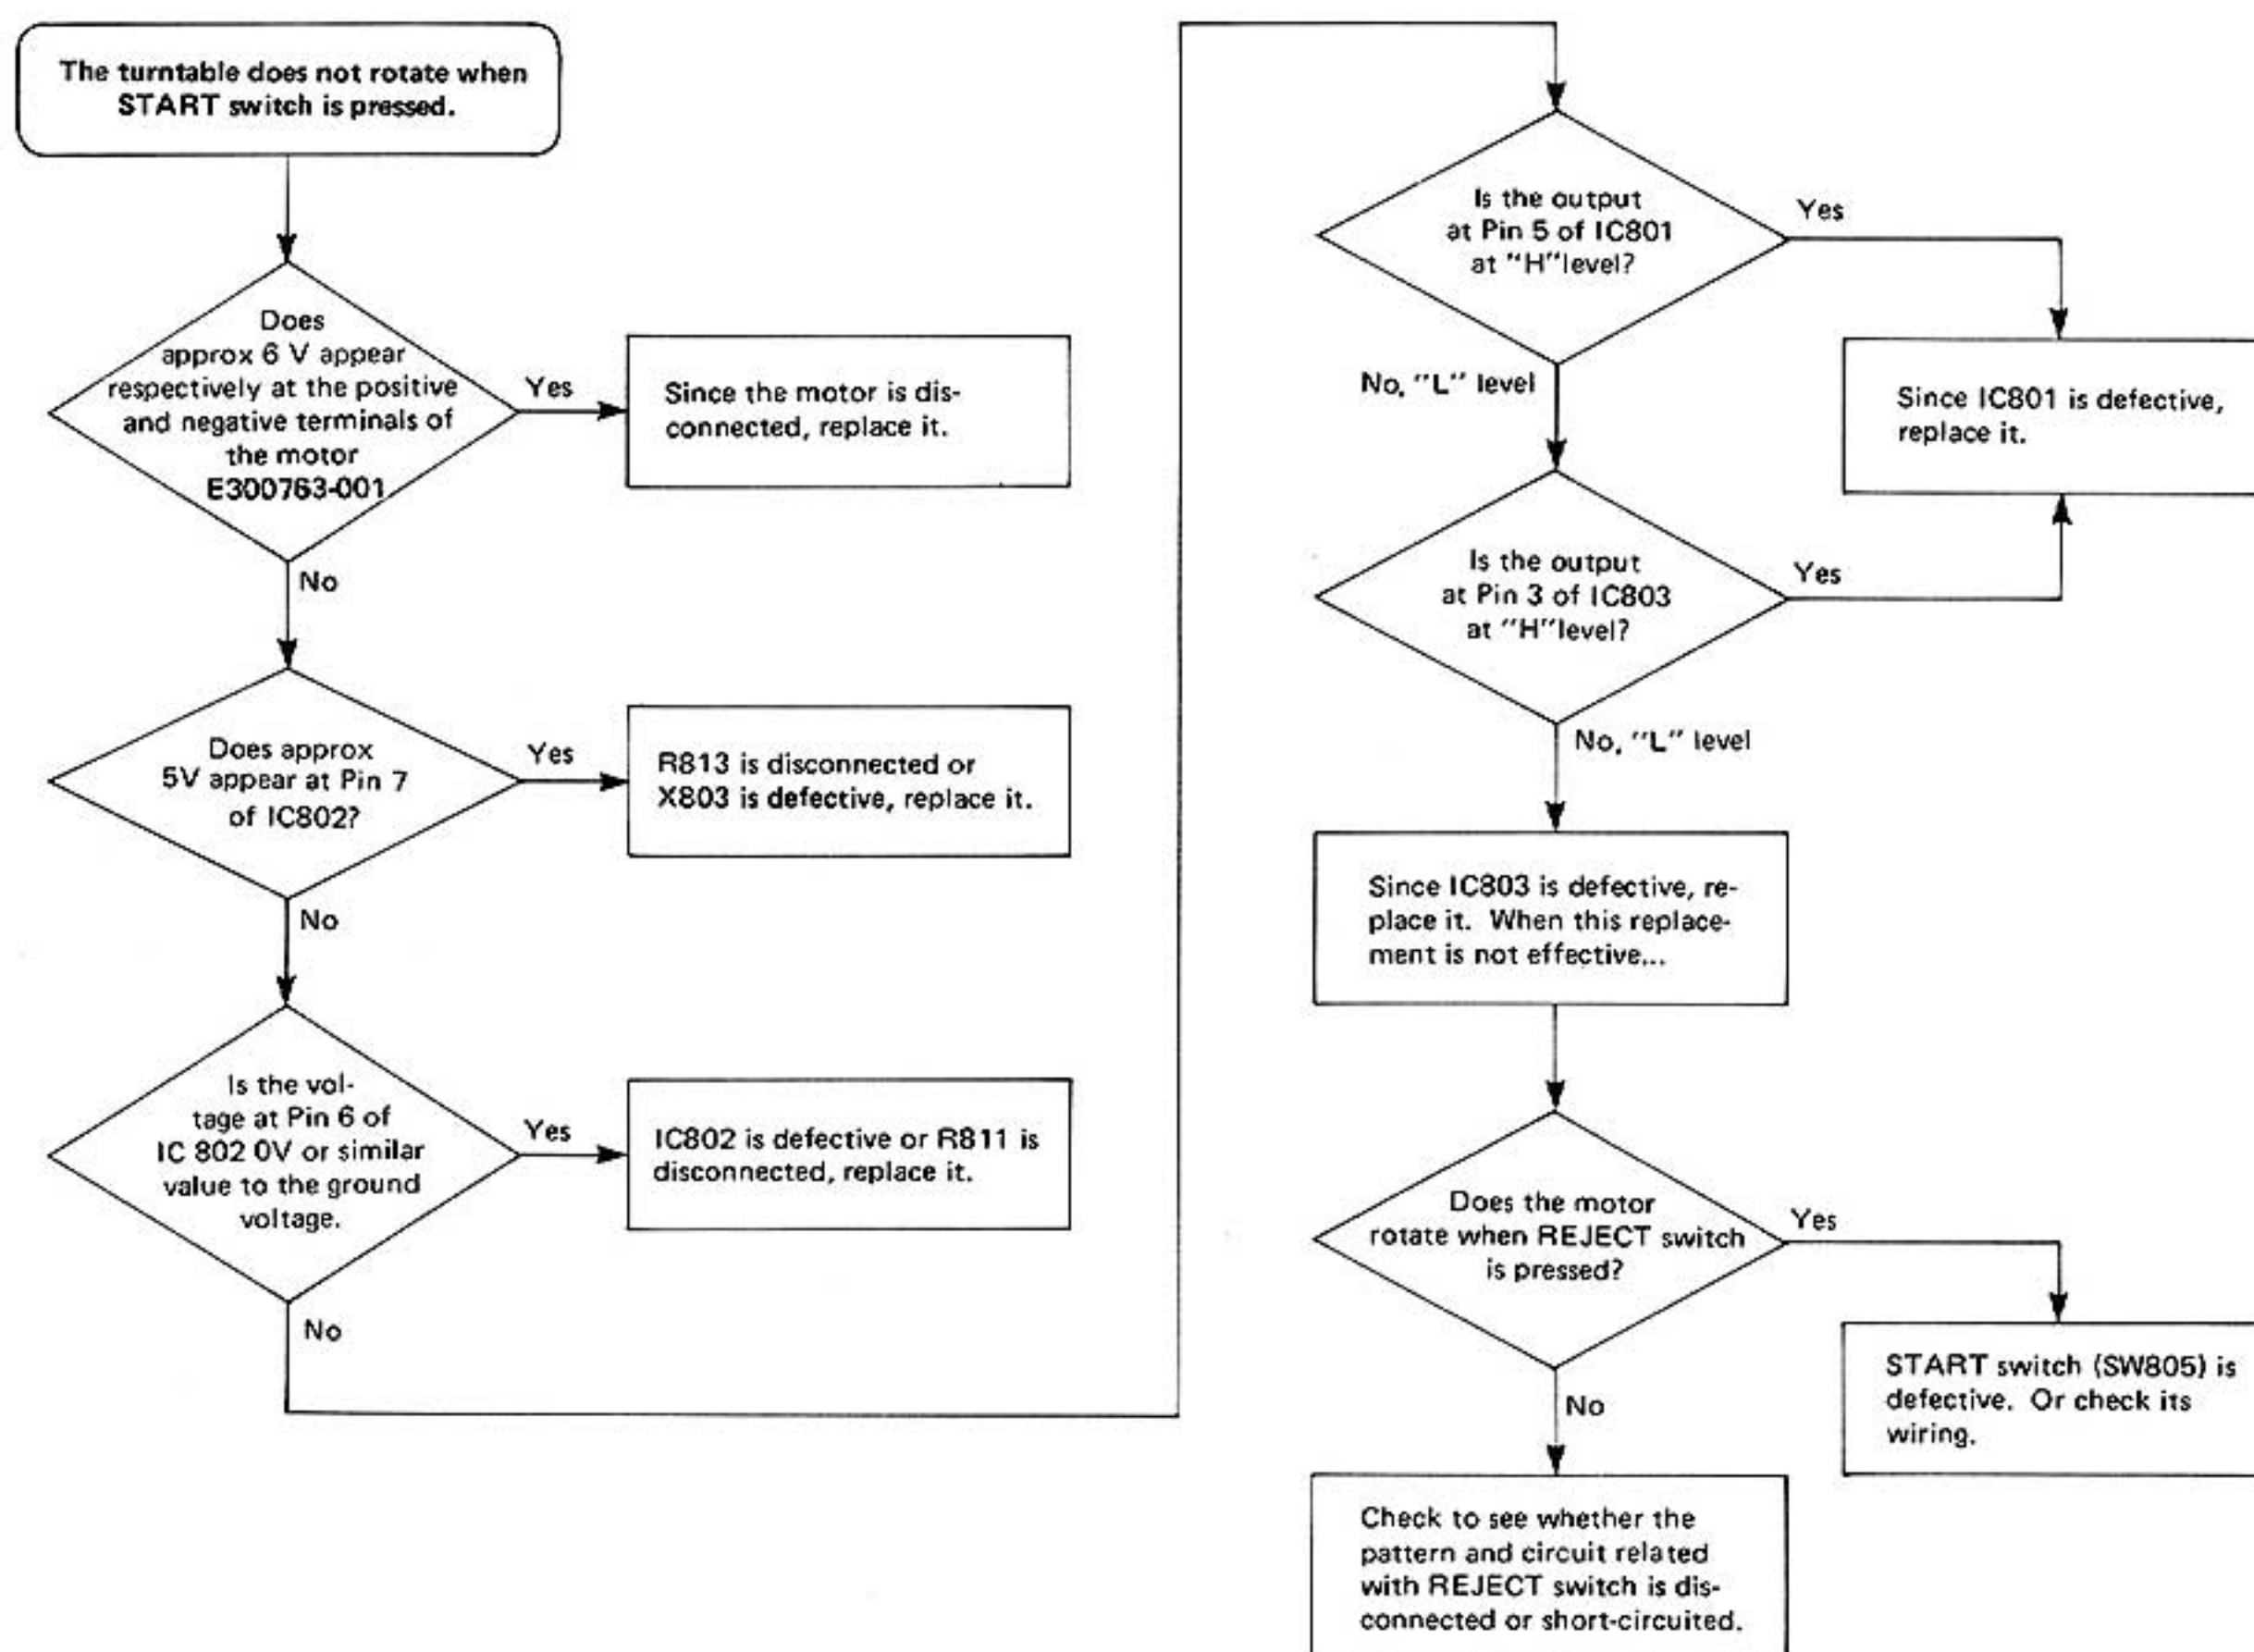

8-(3) The tonearm does not return on record play

8-(4) Tonearm does not reject when REJECT switch is pressed

8-(5) The turntable does not rotate when START switch is pressed

12. L-F66 Schematic Diagram

Notes:

- Notes:
1. The voltage indicated in is measured by a tester having an internal impedance of $33k\Omega/V'$.
 2. indicates signal path.
 3. When replacing the parts in the darkened area  and those marked with , be sure to use the designated parts to ensure safety.
 4. This is the standard circuit diagram.
The design and contents are subject to change without notice.

MC 942E

Warning !

Be careful not to allow metallic dust, etc. to enter inside the unit, because its motor is comprised of magnetic elements.

Notes:

1. The voltage indicated in is measured by a tester having an internal impedance of 33kΩ/V.
 2. indicates signal path.
 3. This is the standard circuit diagram.
The design and contents are subject to change without notice.
- * The TP4011BP is defective, replace the TC4011BP.(C,3)
